Construction

Dec 2023

1. Draw a circle of radius 3.5cm. Take a point P outside the circle at a distance of 7cm from the centre of the circle and construct a pair of tangents to the circle from that point.
2. Contruct a $\triangle ABC$ with sides $BC = 6cm$, $AB = 5cm$ and $\angle ABC = 60°$. Then construct a triangle whose sides are $\frac{3}{4}$ of the corresponding sides of $\triangle ABC$.
3. In Figure-1, $DE \parallel BC$. If $\frac{AD}{DB} = \frac{3}{2}$ and $AE = 2.7cm$, then EC is equal to
   (a) 2.0cm
   (b) 1.8cm
   (c) 4.0cm
   (d) 2.7cm

4. In Figure-2, if $PQ \parallel BC$ and $PR \parallel CD$ that $\frac{QB}{AQ} = \frac{DR}{AR}$.
